 [www.bryllite.com](http://www.bryllite.com)

## Introduction of the Bryllite Platform

The Bryllite Platform is a platform that provides functions which enable gamers to securely store and move their assets and allow asset transactions in order to facilitate reliable transactions without an agency involvement. It is also a platform designed to move the assets having been stored in the internal DB of the game service among various games by storing those assets in the database outside the game service, i.e. the blockchain.

On the Bryllite Platform, Bryllite Coin (BRC) is used as a medium currency to measure the value of gamer assets, and anyone playing games in linkage with Bryllite Platform can acquire BRC fairly and easily.

## 10 Features of the Bryllite Platform

Decentralized

Trust-less Game  
Asset Deal Without  
Transaction Fee

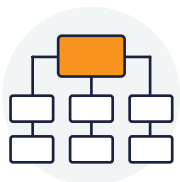

Fastest  
Transaction

Asset Transfer  
over Game

Auction System

Smart Contract

Easy to Use

Device Free

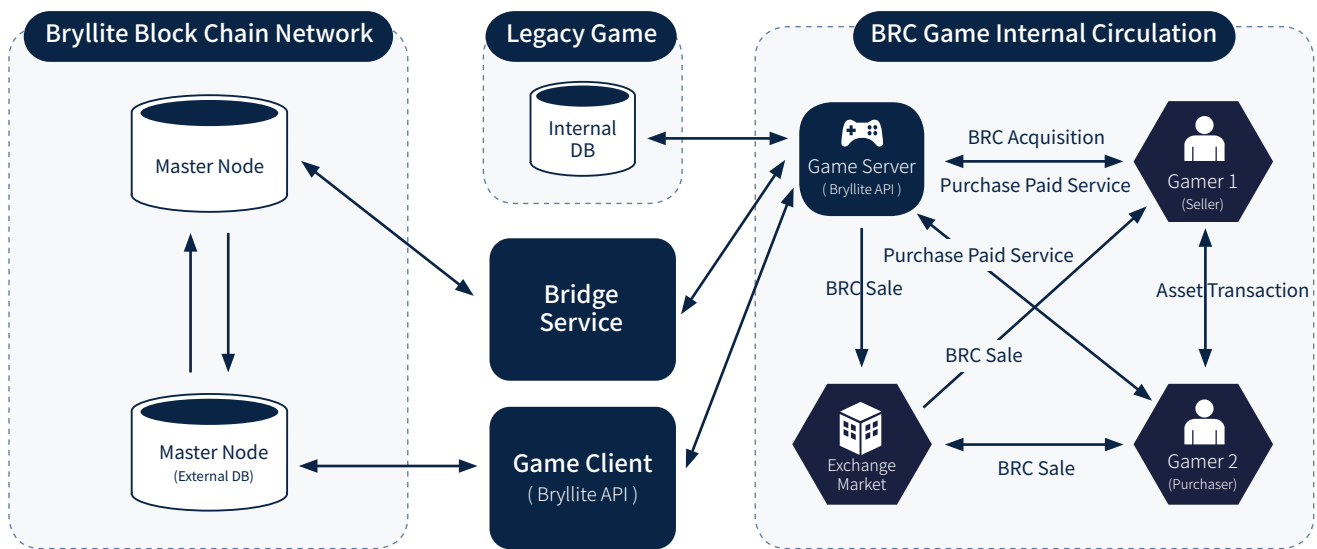

Open Source

Community Support  
over Game

## Bryllite Platform Structure

The Bryllite block chain network is configured as a master node and uses the bridging service to create transactions. The Bryllite game server will provide an external DB service for legacy games. The extension of these functions will be enabled by the legacy game server which is integrated using Bryllite API. This allows for the implementation of interconnected game content.

## Benefit to Bryllite Holders

### Benefit to Gamers

- Currency features and revenue
- The ability to move and trade assets between games
- The freedom from being locked into a game
- The chance to maximize revenue from event block compensation

### Benefit to Developers

- Improve the effectiveness of marketing and game activation
- Increase sales from the increase in market volume
- Development costs for Integration is supported
- Game developers can focus on game content
- New game barriers to entry are reduced
- Developers will gain a better reputation among users

### Benefit to Investors

Building an external blockchain database that is trusted and shared by gamers across different games will create more business opportunities than can be imagined.

## Why Bryllite

### What is the Bryllite Platform?

It is a global game asset consolidation platform that allows gamers to safely store game assets, as well as make safe transactions without any intermediaries or fees.

### The First Cryptocurrency which has Secured Numerous Real Users

BRC already has a user base and has signed MOU's with global game companies with a cumulative subscriber base of 1 billion gamers.

### Give gamers ownership of game assets and Beyond game boundaries

We want to give ownership of game assets back to the gamers and break the boundaries between games. Ownership of game assets will be returned to the gamers and they will be able to trade items across different games.

### Access and usability

You can obtain BRC just by playing games on the Bryllite platform.

BRC can be used as a means of payments when purchasing in game services, as well as transferring and storing game assets. It can also be transferred between wallets and withing cryptocurrency exchanges.

### Bryllite Protocol Agreement

A distributed DB platform based on blockchain. The complexity between nodes is simplified for quicker transactions

### Value stability and profitability

The value of BRC is initially determined by the developer.

After half-life, exchange rate will increase as issuance volume decreases, service competition increases, or scarcity increases.

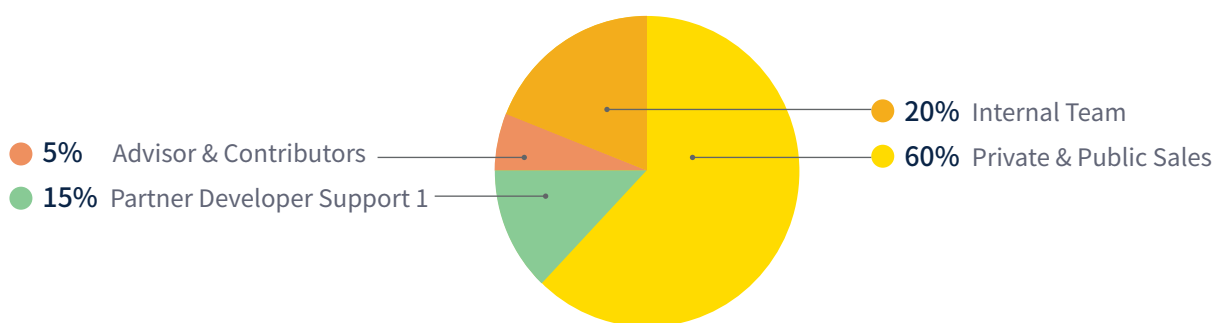

### Offline payment functionality for content

In addition to the payments for in game services, we will provide electronic wallet services for a variety of online/offline content related to games.

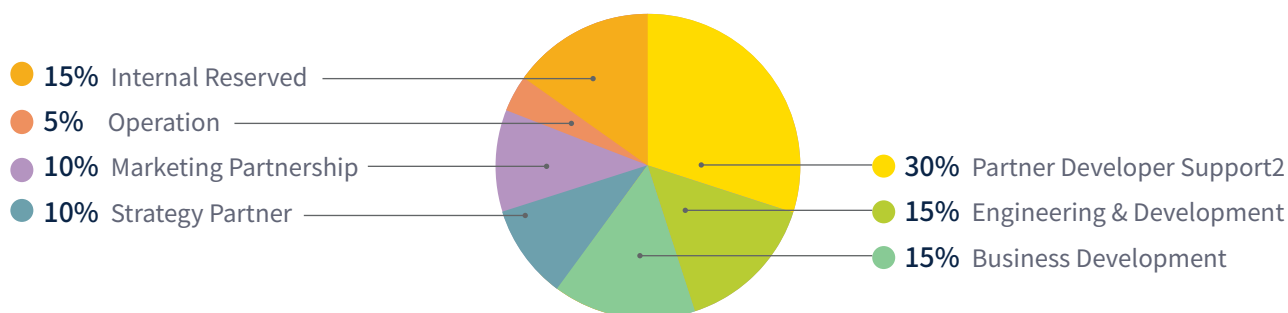

## Bryllite Token Sales Details

Token Sales Details			
No. of Token Issuance	1,000,000,000 (Presale 600,000,000)		
Stage	Private Presale	Public Presale	Public Sale
Sales Period	April 16th – June 30th		July 9th – July 27th

## RoadMap

2018

### • The Beginning of Bryllite

#### 2018 Q3

- Bryllite Core Development (Bryllite Master Node / Observer Node, Excluded Light-weight Node)
- Bryllite token to be listed in exchange markets

#### 2018 Q4

- Bryllite Bridge Service Development
- Bryllite Server/Client API Development
- Bryllite Platform Test-Net Launching

2019

### • The Dawn of Bryllite

#### 2019 Q1

- Cyprus Network Implementation
- Bryllite Platform Main-Net Development
- Partner Developer Game Integration Reference

#### 2019 Q2

- Bryllite Platform Main-Net Launching
- Bryllite token to be exchanged with BRC
- BRC to be listed in major exchange markets

### • The Sunrise of Bryllite

#### 2019 Q3

- Legacy Game Asset Converting Development
- Bryllite Light-weight Node Development (Gamer Personal Wallet Support, PC/Mobile/Web)

#### 2019 Q4

- Smart Contract Support

2020

### • The Brilliant Sunlight

#### 2020 Q1

- Bryllite Platform Service Development: Auction System

#### 2020 Q2

- Bryllite Platform Service Development: Community System

#### 2020 Q3

- Extended Bryllite Platform Service Development
